Interface

Prof. Tiago Sanches da Silva

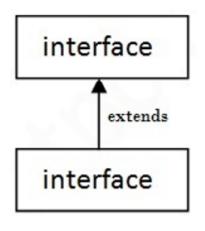

Interface

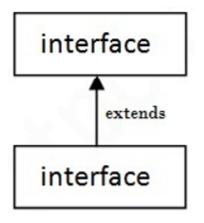

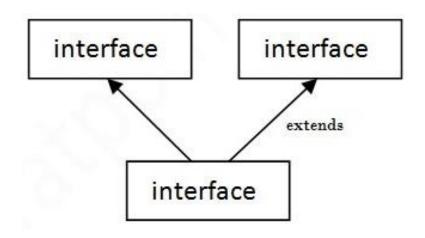

É possível que uma interface herde outra interface, mas no que isso implica?

Basicamente, que para uma classe implementar a interface herdeira, deve implementar também a Interface pai.

```
interface Printable{
void print();
interface Showable extends Printable (
void show();
class TestInterface4 implements Showable{
public void print(){System.out.println("Hello");}
public void show(){System.out.println("Welcome");}
```

Método default Java 8

Desde Java 8, podemos ter corpo de método na interface. Mas precisamos torná-lo método padrão.

```
interface Drawable{
void draw();
default void msg(){System.out.println("default method");}
}
class Rectangle implements Drawable{
public void draw(){System.out.println("drawing rectangle");}
class TestInterfaceDefault{
public static void main(String args[]){
Drawable d=new Rectangle();
d.draw();
d.msg();
}}
```
